Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1921 Excerpt: .two leaves are developed the basal is always larger than the superior. For instance in a fruiting specimen, collected on the second day of August the two leaves showed the size as follows: Basal leaf: central segment, length 16.5 cm. width 9.0 cm. Basal leaf: lateral segment, length 22.0 cm. width 7.0 cm. Superior leaf: central segment, length 14.0 cm. width 5.5 cm. Superior leaf: lateral segment, length 15.0 cm. width 5.4 cm. In a staminate specimen, collected on May 31st, the single leaf measured: Central segment length 9.5 cm. width 4.2 cm. Lateral segment length 12.0 cm. width 3.1 cm. As compared with the typical plant the variety pusilla is thus readily distinguished by (1) its late appearance, late blooming and fruiting; (2) the relatively smaller size of inflorescence, spathe and spadix; (3) the uniform deep color of the spathe, except in chlorotic specimens; (4) the leaf-segments being narrower, and the two lateral being generally longer and narrower than the central (Fig. 5); (5) the approximately falcate shape of the lateral segments; and finally (6) the habitat being either low woods, partially inundated during the winter, or sphagnum-bogs. I have not, so far, found the typical plant and the variety growing together, and considering the nature of the surroundings, I presume these to be the direct environal cause of the modified structure observable in the variety pusilla. In other words Arisaema triphyllum illustrates a case of seasonal dimorphism, which might eventually lead to the segregation...
