Not illustrated. 1916 Excerpt: . know upon entering a block or certain section of the road: 1. Whether there is another car in the block. 2. How many cars there are in the block. 3. What direction the cars are going. The last requirement is, of course, applicable to single-track roads only. As a matter of fact, nearly all signals are confined to the first class only or the first and third classes, but very few in general use answer the second question. In order to do this automatically, complex circuits, which involve difficulties and excessive expense in their maintenance are required. Signals displayed on the cars are often used to signify that another car is in the same block. As to the method of signal control, commercial signaling systems may be divided into four classes: namely, manual, dispatcher s, intermittent, and continuous track circuit. The distinctive features and applications of these systems will now be discussed. Block Signals.--A block as defined by the American Railway Association is a length of track of defined limits the use of which by trains is controlled by block signals. If but one train is permitted in a block at a time, the system is known as an absolute block system. Where two or more trains, going in the same direction, are permitted in a block at the same time, the system is called a permissive following block system and it must be so arranged that the following trains will receive a caution signal...
